FREIGHT WITH AKYILDIZ

Every shipment is different. Its plan should be too.

AKYILDIZ approaches international transport through the characteristics of the cargo, the route and the delivery requirements. From full and part loads to temperature-sensitive shipments, containers and special-dimension equipment, we consider the options that fit. Road, sea and air solutions are planned around each shipment's scope.

Cargo-focused assessment

Starting with dimensions, weight, product characteristics and loading requirements.

Route-specific planning

Considering origin, destination and transport method as one connected plan.

Clear, direct communication

Clarifying the transport scope and delivery expectations together from the outset.

OUR TRANSPORT SOLUTIONS

Road freight
Sea freight
Air freight
Refrigerated transport
Container transport
Flatbed transport

OUR OPERATING REGIONS

Different markets. Connected routes for international trade.

From Europe to Central Asia, and from the Balkans to the Middle East and the Gulf, we plan shipments around their origin, destination and cargo requirements.

Europe
Western and Northern European markets

Balkans
Regional trade connections across Southeastern Europe

Russia
International freight routes serving Russian markets

Caucasus
Connections across Georgia, Azerbaijan and Armenia

Central Asia
Kazakhstan and other markets across the region

Eastern Europe
Regional production and distribution connections

Belarus
Regular transport activity serving Belarus

Middle East
Freight options for regional trade centres

Gulf
Logistics solutions for the Gulf countries

AKYILDIZ
LOGISTICS

FTL / LTL

Road freight

Road transport planned around collection and delivery points, with full and part-load options. Curtainsider solutions provide flexible planning for a wide range of commercial cargo.

Full truckload and part-load transport options

Assessment of side and top loading

Routes planned around collection and delivery

For pallets, cartons and industrial goods, vehicle selection considers dimensions, weight, packaging and the practical requirements at each loading point.

AKYILDIZ

LOGISTICS

FCL / LCL

Sea freight

Sea freight options for international trade and volume shipments. Full and shared container solutions are assessed around ports, cargo characteristics and the required delivery scope.

Full container and shared container options

Planning around origin and destination ports

Assessment of cargo volume and packaging

The shipment plan is shaped by the product, total volume, gross weight, loading date and the requested delivery terms.

AKYILDIZ
LOGISTICS

AIR CARGO

Air freight

Air cargo options for shipments with time-sensitive plans. We consider origin and destination airports, product contents, package dimensions and the intended delivery date together.

Assessment of time-sensitive shipment requirements

Planning around package dimensions and weight

Airport and address connections defined together

Cargo readiness, packaging, product characteristics and delivery expectations define the scope. Any special product information is considered at the enquiry stage.

FRIGO

Refrigerated transport

Transport planning for temperature-sensitive cargo, built around the product's requirements. Temperature ranges, packaging and loading conditions are clarified together at the start of the shipment.

Identifying the product's required temperature range

Assessing pallet and packaging conditions together

Planning around loading and delivery schedules

The product type, its condition at loading, cargo quantity and specific transport instructions form the basis of temperature-controlled shipment planning.

CONTAINER

Container transport

Container transport options connecting ports, terminals and delivery points. Cargo dimensions, weight and loading methods guide the container requirements and the scope of the move.

Identifying a suitable container type together

Connections between ports, terminals and addresses

Assessment of equipment and delivery requirements

Container quantity, type, gross cargo weight and the planned date help establish the vehicle, equipment and connections needed for the shipment.

AKYILDIZ
LOGISTICS

FLATBED

Flatbed transport

Open-platform solutions for machinery and equipment requiring top or side loading. Cargo structure, lifting points and practical access at the collection and delivery sites are assessed together.

Access for top and side loading

Assessment of dimensions and securing points

Planning for cranes and site access

Technical drawings or cargo photographs, final packed dimensions and weight support vehicle selection and a loading plan tailored to the shipment.

AKYILDIZ
LOGISTICS

PROJECT CARGO

Project cargo

Detailed assessment for special-dimension cargo that needs more than a standard transport plan. Machinery, equipment and oversized shipments are considered alongside route, vehicle and site conditions.

Technical drawings and centre-of-gravity assessment

Vehicles and equipment suited to dimensions

Combined review of route and access

Each plan is developed from actual dimensions, lifting and securing points, loading methods and the access conditions at the delivery site.

OUR APPROACH

From cargo to route, clarity at every step.

A practical shipment plan begins with the right information. We connect cargo characteristics and delivery expectations with a clearly defined transport method.

Understand the cargo

We assess the product, dimensions, weight, packaging and any special conditions to establish the shipment's requirements.

Define the route

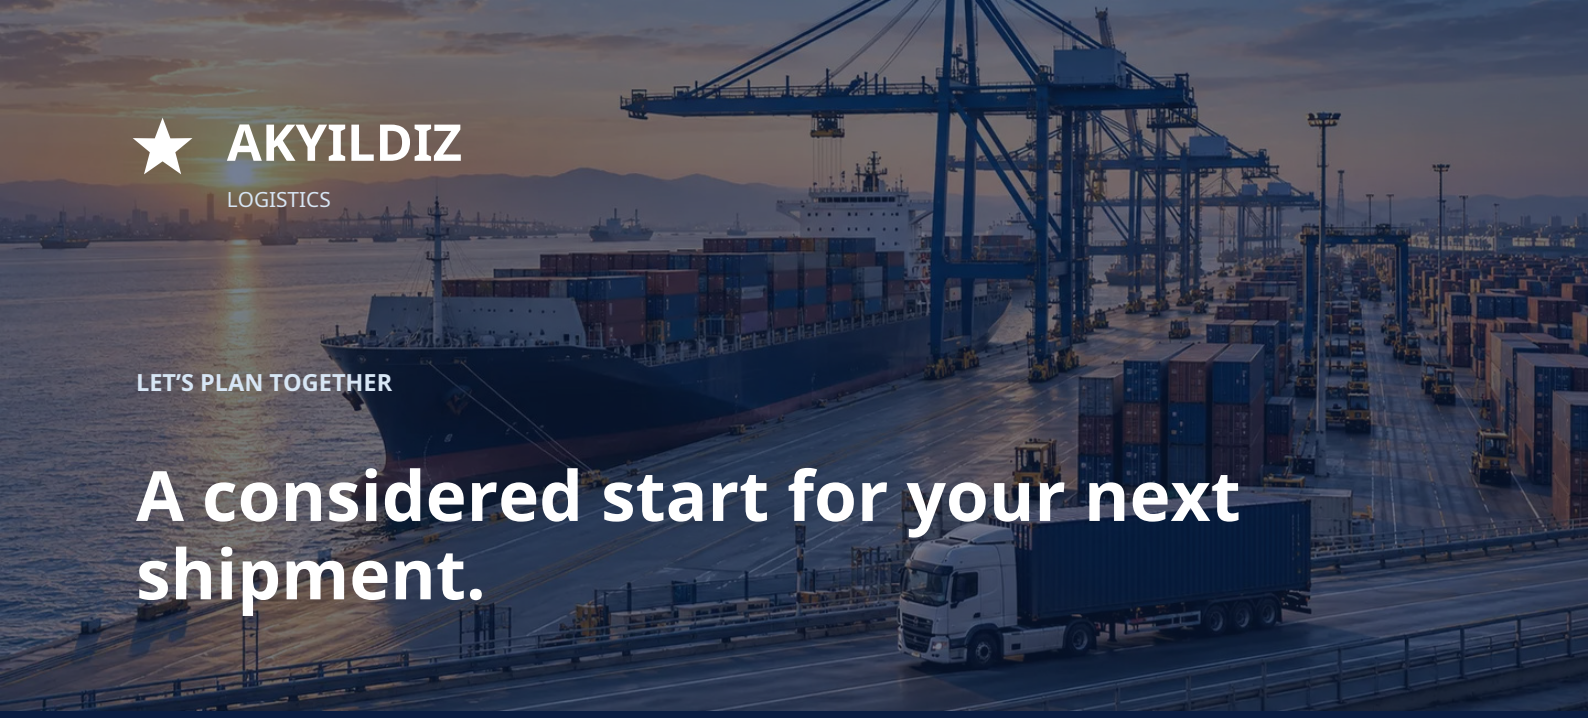

We clarify origin, destination, address or port connections and the intended shipment dates together.

Plan the method

Road, sea and air options are considered against cargo characteristics and delivery expectations to define the scope.

Clarify delivery

Loading and unloading conditions, site access and responsibilities are considered together within the agreed transport scope.

LET'S PLAN TOGETHER

A considered start for your next shipment.

Share your transport requirements. Together, we can assess the options for your cargo, route and delivery expectations.
